10-port Full Gigabit Bypass Managed Industrial PoE Switch
(ONV-IPS33010PFM-BY)

OVERVIEW

The ONV-IPS33010PFM-BY is a full Gigabit bypass managed industrial PoE fiber switch independently developed by ONV. It has 8*10/100/1000M adaptive RJ45 ports and 2*100/1000M uplink SFP fiber ports. Port 1-8 can support IEEE 802.3 af/at PoE standard, and single-port PoE power up to 30W. As a PoE power supply device, it can automatically detect and identify the electrical equipment that meets the standard and supply power through the cable. It can supply the POE terminal equipment, such as wireless AP, IP camera, network telephone, industrial sensor, and so on, to meet the demand for a high-density PoE power supply network environment. The switch integrates the Bypass optical switching module. When the power supply of the switch is interrupted, the optical fiber is automatically switched to the bypass-through state to avoid communication interruption due to switch failure and ensure the reliability of network transmission. It is suitable for intelligent transportation, rail transit, electric power, mining, metallurgy and green energy, and industrial scenes such as construction setting up a cost-effective and stable communication network.

The ONV-IPS33010PFM-BY has L2+ network management function, supports IPV4 static

route forwarding, security protection mechanism, ACL/QoS policy, and VLAN, and is easy to manage and maintain. Support multiple network redundancy protocols STP/RSTP/ MSTP(<50ms) to improve link backup and network reliability. When a one-way network fails, communication can be quickly restored to ensure important Uninterrupted communication for applications. According to the actual application requirements, you can configure multiple application services such as PoE power management, port traffic control, VLAN division, and SNMP through the Web network management mode.
