12-port 2.5G Managed PoE Switch

(ONV-POE57128PFM)

OVERVIEW

The ONV-POE57128PFM is a 2.5G managed PoE fiber switch independently developed by ONV. It has 8*10/100/1000/2500Base-T adaptive RJ45 ports and 4*1/10G SFP+ fiber ports. Port 1-8 support the IEEE 802.3af/at PoE standard, and the single-port PoE power reaches 30W. As a PoE power supply device, it can automatically detect and identify powered devices that meet standards and power them through network cables. It can power PoE terminal equipment such as wireless APs, IP cameras, Internet telephones, video access control intercoms, etc., through network cables to meet the network environment that requires a high-density PoE power supply. It is suitable for hotels, campuses, factories, parks, supermarkets, and small and medium-sized enterprises to establish cost-effective networks.

The ONV-POE57128PFM has L2+ network management function, supports IPV4/IPV6 management, static route forwarding, complete security protection mechanism, complete ACL/QoS policy, and rich VLAN functions for easy management and maintenance. Supports multiple network redundancy protocols STP/RSTP/MSTP (<50ms) and (ITU-T G.8032) ERPS (<20ms) to improve link backup and network reliability. When a one-way network fails, communication can be quickly restored to ensure uninterrupted communication for important applications. According to application needs, PoE power

supply management, port management, routing address management, port flow control, VLAN division, IGMP, security policy, and other application service configurations are performed through network management methods such as Web, CLI, SNMP, and Telnet.

FEATURE
